

Season Reset

The Season Reset screen is used to change season from Winter to Summer/Winter and vice versa. This will allow users to differentiate forecasting deliveries between two seasons since Summer Season has less delivery activities than Winter Season due to weather. Doing a Season Change will reset a specific Degree Day Clock and will update delivery records in Consumption Site.

Field Description

Current Season - This field shows the current season of the selected clock. This is same with the current season from Degree Day Clock screen.

New Season - By default, this is set to Winter. This field shows the new season after the current season has been reset.

Season Change Date - This is the last degree day entry in clock reading of the specific clock.

Accum Degree Day - This shows the Accum DD of the last degree day entry in clock reading.
