

Lot Split

Overview:

- This option will be useful to split the lot to different lot with the same parent Lot ID for the partial quantity
- The source and destination location could be in the same or different factory warehouses
- On split, the system creates new lot with different lot ID but with the same parent lot ID
- This process creates "SPLIT OUT" and "CREATE/RECEIVE - SPLIT IN" transactions in the current and the new lots respectively
- This transaction can be undone only from the current lot as "CREATE/RECEIVE" transaction can not be undone. When the transaction is undone the split quantity will be reversed back in the current lot and the new lot will be removed from the inventory
- "Split Lot" screen can be opened by clicking on the menu option "Lot Split" in "Inventory View"
