

Outbound Overview

Outbound orders are created in i21 Warehouse module in order to send goods out of the warehouse. There are two types of Outbound orders viz:

Warehouse Transfer: When an organization ships goods from one warehouse to another within the same Company, then an 'Outbound Warehouse Transfer Order' is created.

Sales Order: When an organization ships goods from the warehouse to a customer, third party or another warehouse that is not within the same system, then an 'Outbound Sales Order' is created.
