

Supply Point

Supply Point Maintenance screen allows you to create , edit and view supply point details for a Fuel Supplier. A Fuel Supplier can have multiple supply points.

This program allows the operator to create and maintain transport prices that will be used in conjunction with the rack prices.

This program allows the operator to create and maintain the records used by the Transport system to match your vendor/item information to the terminal location/item information in the imported file.

Open the Supply Point screen from **Transports | Supply Point**. If there is no existing record yet, the menu will open a blank supply Point screen where you can enter the details of a new record.
