## How to Configure a column

- 1. A new row will be available in the grid section.
- 2. In the Column Type field, select a type for the column.
- In the Column Name field, enter the name you would like to call the column. The value entered in this field may show on your financial report, granted the Caption field for that column is set to Column Name. This is discussed more on How to Add Column Name Row.
- 4. In the Caption field, select the type of caption you want for the column. This is discussed more on How to Add Column Name Row.
- 5. In the Start Offset field select the Start Date Offset from the available options to select from. This is discussed more on How Start and End Offset works.
- 6. The **Start Date field** will show the date based on the Start Offset selected and the Run Date. This gives you a preview of what the Start Date will be. It is only when Custom is selected in the Start Offset field where you need to specify the date. The rest are computed by the system.
- 7. The End Date field will show the date based on the End Offset selected and the Run Date. This gives you a preview of what the End Date will be. It is only when Custom is selected in the End Offset field where you need to specify the date. The rest are computed by the system.
- 8. The Column Calculation field is used only on Column Calculation column type. This is discussed more on How to Configure Formula for Column Calculation column.
- 9. The Segment Filter field is useful to the following column types since it allows you can specify location/s filter . This is discussed more on How to Use Segment Filter in the Column Designer.
  - a. Beginning Balance
    - Budget
    - c. Credit
    - d. Credit Units
    - e. Debit
    - f. Debit Units
    - g. Ending Balance
    - h. GL Amounts
    - i. GL Trend
    - i. Units
- 10. The **Budget Code field** is used only on Budget column type. This is discussed more on How to Add Budget column.
- 11. The Percentage field is used only on Percentage column type. This is discussed more on How to Add Percentage column.
- 12. In the Width field, set it to your desired column width. By default it is set to 160 pixels, which is approximately 1 1/4 inches.
- 13. In the Alignment field, set how the value for the column be displayed.
  - Select Center if you want it Centered
  - Select Left if you want it Left Aligned
  - Select **Right** if you want it Right aligned
- 14. In the Format field, assign how the numbers be shown in the column. Will it have decimals, money sign or in percentage format.
- 15. Check Hidden checkbox if you don't want the column be shown on the report. This is useful if you need a column that will be part of the formula of another column and you just need to derive the numbers extracted from that column to build the formula. This is discussed more on How Hidden checkbox works when enabled.
