

# How to Upgrade i21 Only Environment

This install wizard is applicable for install/upgrade without Origin integration.

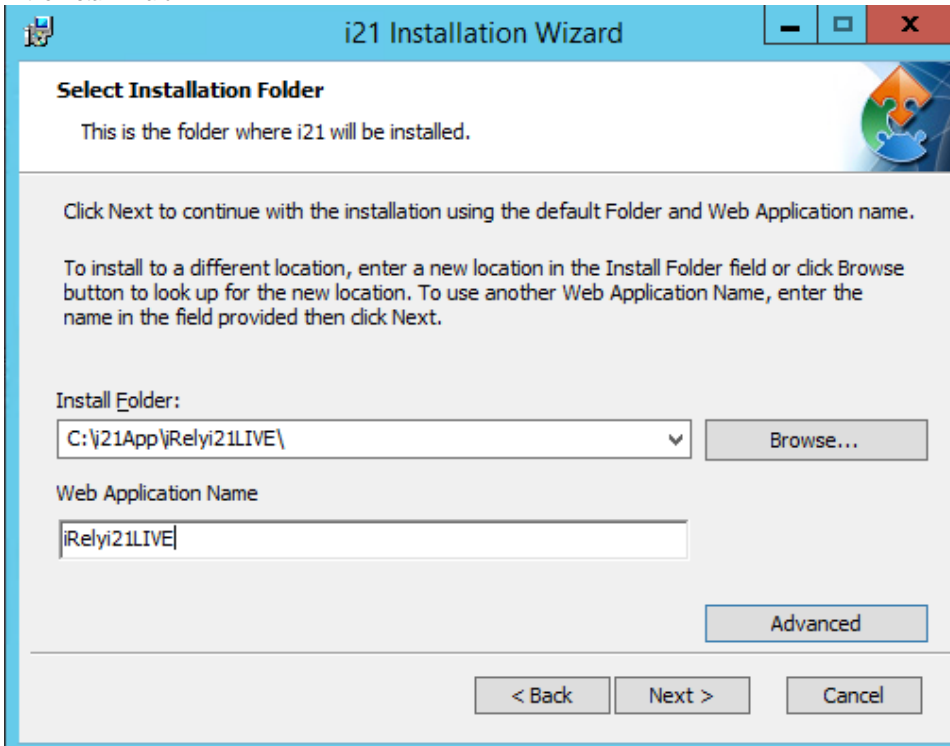

1. Remove the installed i21 application in the Control Panel | **Programs and Features**
2. After uninstall, make sure that **webconfig** file in the i21 install folder exists.

► This PC ► Local Disk (C:) ► i21App ► iRelyi21LIVE

Name	Date modified	Type	Size
index	4/5/2017 1:05 PM	HTML File	1 KB
web	4/21/2017 1:19 AM	CONFIG File	1 KB

The i21 Keys should also be retained after uninstall.

3. Run the latest installer.
4. In the install wizard:

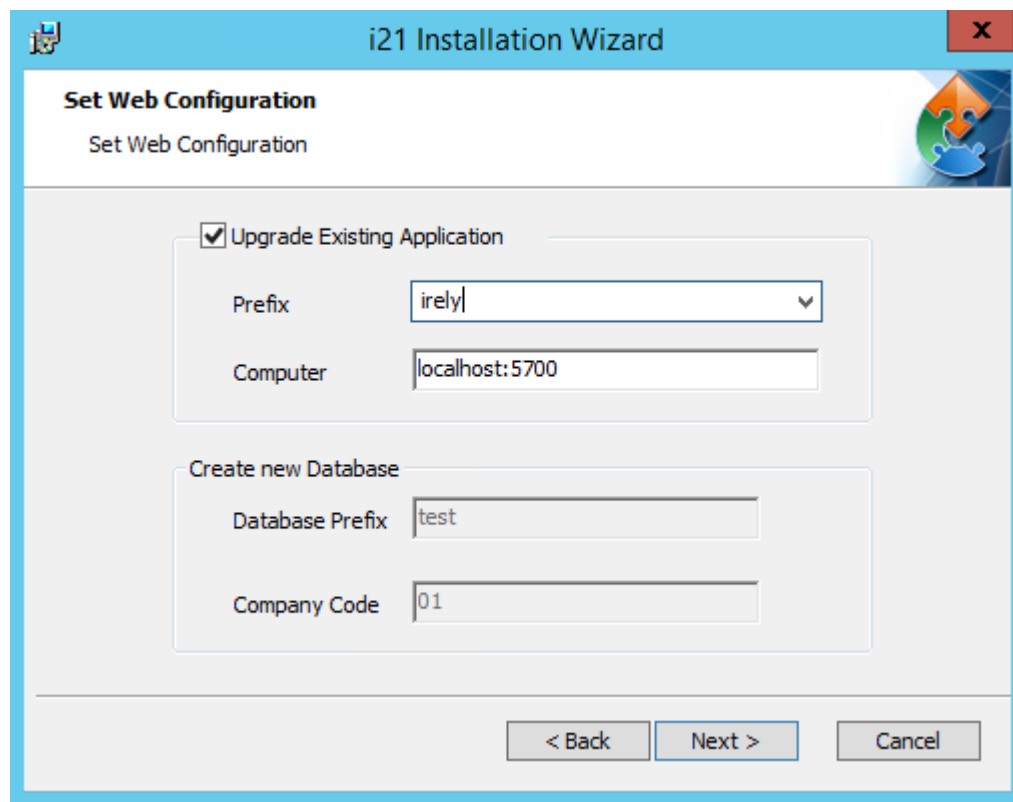

The screenshot shows the 'i21 Installation Wizard' window. The title bar says 'i21 Installation Wizard'. The main heading is 'Select Installation Folder'. Below it, a message says 'This is the folder where i21 will be installed.' There is a sub-message: 'Click Next to continue with the installation using the default Folder and Web Application name. To install to a different location, enter a new location in the Install Folder field or click Browse button to look up for the new location. To use another Web Application Name, enter the name in the field provided then click Next.' The 'Install Folder:' section has a text box containing 'C:\i21App\iRelyi21LIVE\' and a 'Browse...' button. The 'Web Application Name' section has a text box containing 'iRelyi21LIVE'. At the bottom right is an 'Advanced' button. At the very bottom are three buttons: '< Back', 'Next >', and 'Cancel'.

**Install Folder** - Select the install folder used in the previous build/version.

**Web Application Name** - Enter the same Web App name used in the previous build/version.

5. Click Next. Clicking Next button will automatically select **IRELY** SQL Server instance name and default back up folder **D:\irelyinstall\backup**. Else, click Advanced button to select the SQL Server and back up folder path.
6. In this screen, enter the **Prefix**. This corresponds to the prefix name of the database.

**i21 Installation Wizard**

### Set Web Configuration

Set Web Configuration

☒ Upgrade Existing Application

Prefix:

Computer:

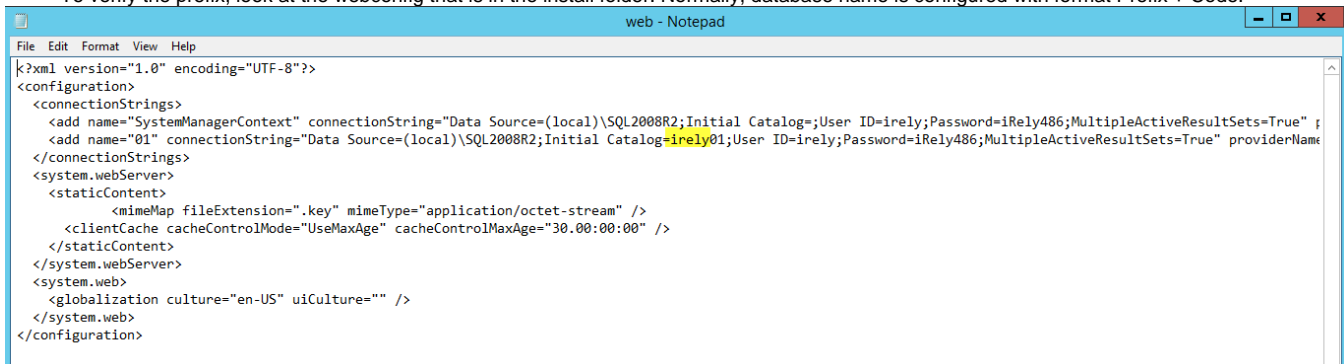

Create new Database

Database Prefix:

Company Code:

< Back   Next >   Cancel

To verify the prefix, look at the webconfig that is in the install folder. Normally, database name is configured with format Prefix + Code.

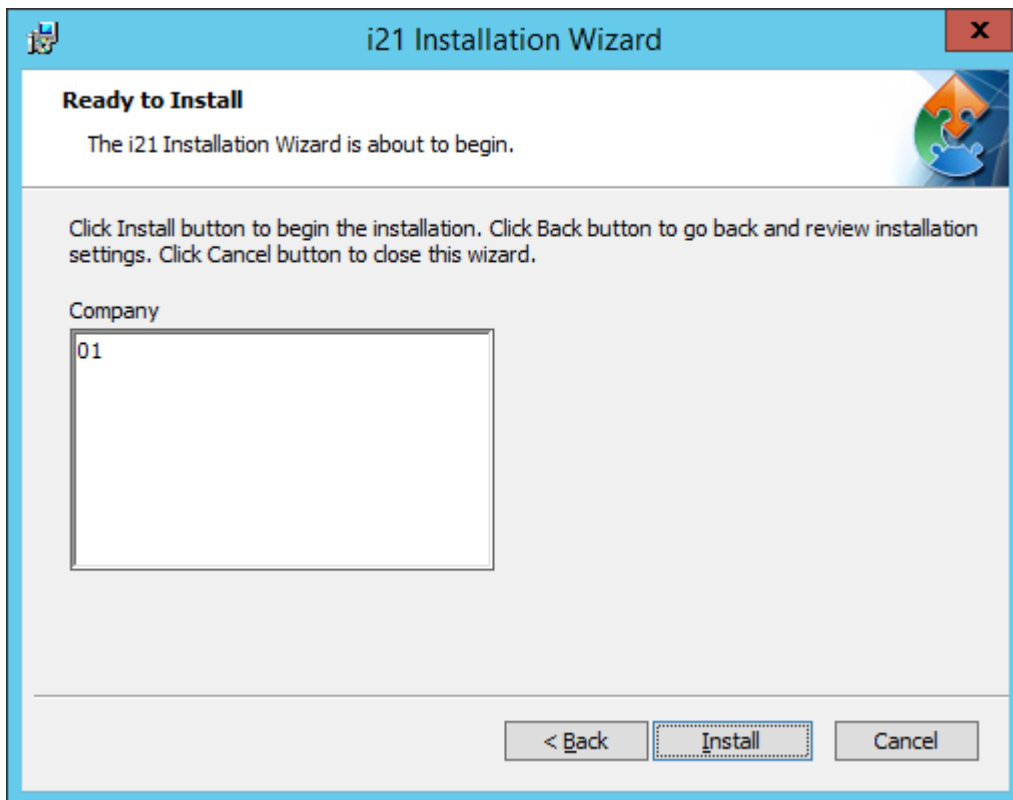

```

File Edit Format View Help
web - Notepad
<?xml version="1.0" encoding="UTF-8"?>
<configuration>
  <connectionStrings>
    <add name="SystemManagerContext" connectionString="Data Source=(local)\SQL2008R2;Initial Catalog=User ID=irely;Password=iRely486;MultipleActiveResultSets=True" />
    <add name="01" connectionString="Data Source=(local)\SQL2008R2;Initial Catalog=irely01;User ID=irely;Password=iRely486;MultipleActiveResultSets=True" providerName="System.Data.SqlClient" />
  </connectionStrings>
  <system.webServer>
    <staticContent>
      <mimeTypeMap fileExtension=".key" mimeType="application/octet-stream" />
      <clientCache cacheControlMode="UseMaxAge" cacheControlMaxAge="30.00:00:00" />
    </staticContent>
  </system.webServer>
  <system.web>
    <globalization culture="en-US" uiCulture="" />
  </system.web>
</configuration>

```

7. Click Next. The Company Code should display.

This is the same company code that is shown in the webconfig file.

```
web - Notepad
File Edit Format View Help
<?xml version="1.0" encoding="UTF-8"?>
<configuration>
  <connectionStrings>
    <add name="SystemManagerContext" connectionString="Data Source=(local)\SQL2008R2;Initial Catalog=;User ID=irely;Password=iRely486;MultipleActiveResultSets=True" />
    <add name="01" connectionString="Data Source=(local)\SQL2008R2;Initial Catalog=irely01;User ID=irely;Password=iRely486;MultipleActiveResultSets=True" providerName="System.Data.SqlClient" />
  </connectionStrings>
  <system.webServer>
    <staticContent>
      <mimeMap fileExtension=".key" mimeType="application/octet-stream" />
      <clientCache cacheControlMode="UseMaxAge" cacheControlMaxAge="30.00:00:00" />
    </staticContent>
  </system.webServer>
  <system.web>
    <globalization culture="en-US" uiCulture="" />
  </system.web>
</configuration>
```

8. Click Install.
