

# Lease Billing Incentive

The **Lease Billing Above Min Use Incentive** screen can be used to configure the incentive program for a lease billing based on site capacity and minimum usage. There are instances when a discount or incentive is given to a customer that has consumed more than the defined minimum usage. For example, a 500 gal capacity is configured to have a Minimum Usage of 250 gals; if customer A with the same site capacity received more than 250 gals of delivery, then this customer will not be billed for leasing the tank. Otherwise, the same lease amount will be billed to the customer.

To further illustrate this,

- If the **Total Capacity** (from Consumption Sites screen) is less than or equal to the **Site Capacity** (from Lease Billing Incentive screen), and the **YTD Gallons This Season** (from Consumption Sites screen) is less than or equal to the **Minimum Usage** (from Lease Billing Incentive screen), then the customer will be charged with the whole lease amount.
- If the **Total Capacity** (from Consumption Sites screen) is less than or equal to the **Site Capacity** (from Lease Billing Incentive screen), and the **YTD Gallons This Season** (from Consumption Sites screen) is greater than the **Minimum Usage** (from Lease Billing Incentive screen), then the customer will not be charged with the whole lease amount.

The logic above will only apply to [Leases](#) with **Billing Type set to Gallons**.

## Field Description

**Enable Lease Billing Above Min Use Incentives** - Check this if the you want to use the incentive program. If this option is deselected, the Bill Amount field on [Lease Billing screen](#) will always equal to the Lease Amount.

**Site Capacity** - Enter the consumption sites' Total Capacity.

**Minimum Usage** - Enter the minimum consumption before the customer can receive an incentive.
