

How to Configure Gauge Chart Style

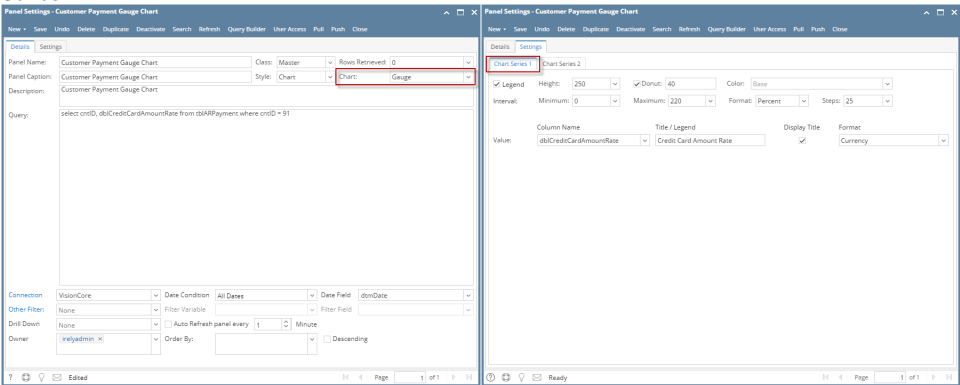

A **Gauge Chart** is used to show progress in a certain variable. This only accepts one value per series. You should make sure that the set query will only return 1 record or else it will get the last record from it.

Configuration Option:

Name	Type	Default	Description
Height	number	250	The height of the chart in pixels
Donut	boolean/number	false	Use the entire disk or just a fraction of it for the gauge
Minimum	number	0	The minimum value of the interval to be displayed
Maximum	number	100	The maximum value of the interval to be displayed
Format	string	number	
Steps	string	10	The number of steps to add to the interval
Value: Column Name	string		The Column Name of where we get the data.
Value: Title/Legend	string		Title to be set on the chart
Value: Display Title	boolean	false	
Value: Format	string	number
