# How to Edit Panel Connection

Connections are established to connect the dashboard to the database that is holding the data you want to display.
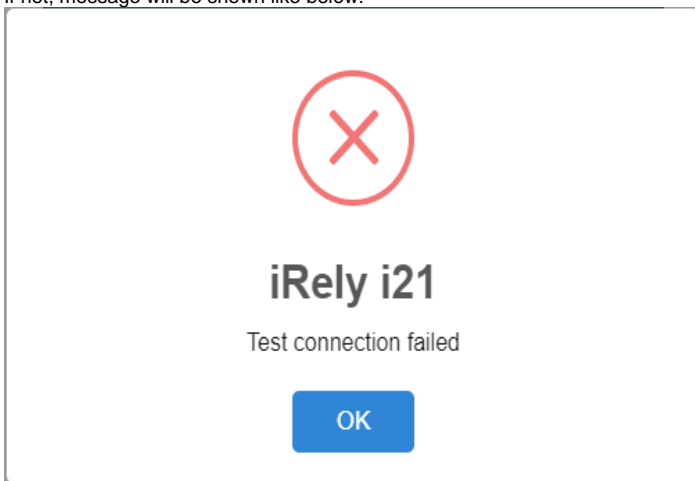

> ⚠️ Editing connections may require help from your network administrator. Only user that has Administrator Dashboard Role can create new connections.

1. Click the **Panel Connection** menu *(Connections in 17.1)* from the Dashboard main Menu.
2. Select Connection record to update by clicking **Next** or **Previous button**.
3. Update desired Connection fields then click **Save toolbar button**.
4. To verify whether the connection you edited is working, click the **Test toolbar button**.
   If successful, message will be shown like below:

   If not, message will be shown like below:

   In case like this, kindly review your connection details if you are connecting to an existing and working database.
