# Inventory Status

The **Inventory Status screen** is where you record all possible status of inventories used in your operation. Inventory Status denotes the physical location of a device. This screen can be accessed via **Devices screen > Inventory Status Label**. You can add as many inventory status as needed.

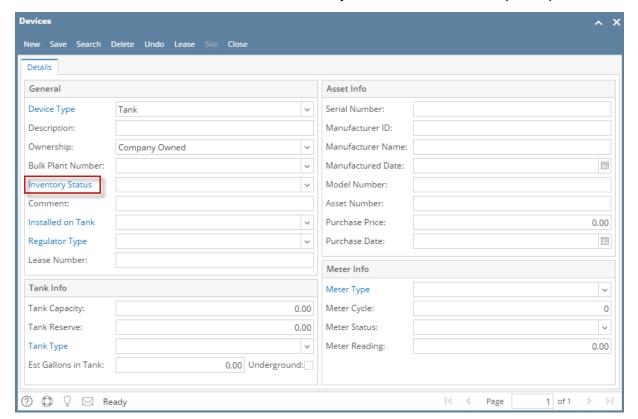

The system has predefined inventory status types: In, Out, Sold, and Not In Service. These predefined inventory status types are not editable.
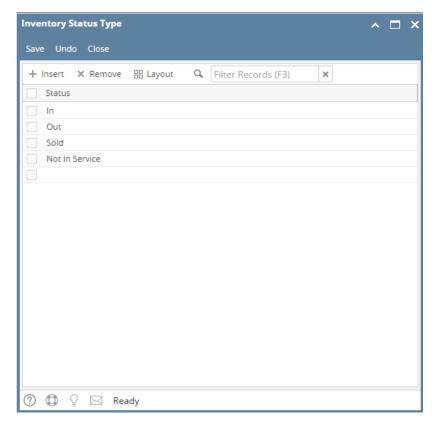

- **In** - The device is still on company's inventory.
- **Out** - The device is already attached/installed to a consumption site.
- **Sold** - The company already sold the device.
- **Not In Service** - The device is still on company's possession and such is not anymore in working condition

There are processes in Tank Management where a device's inventory status is changed automatically. These processes are described below.

- **From "In" to "Out"** - this happens when a device on company's inventory is attached to a consumption site. See also How to Attach a Company Owned device
- **From "Out" to "In"** - this happens when a company owned device is returned to the bulk plant location from the customer premises or when the device is detached. See also How to Detach or Remove a Device, and How to Perform 'Pick up and Transfer Back to Bulk Plant Location' Device Action
- **From "Out" to "Sold"**, only available if attached device is a Company Owned device (Ownership is Company Owned) – this happens when an attached company owned device is sold to the customer and processed via Device Action > Sold. See also How to Perform 'Sold' device action

The **Inventory Status screen** is where you record all possible status of inventories used in your operation. Inventory Status denotes the physical location of a device. This screen can be accessed via **Devices screen > Inventory Status Label**. You can add as many inventory status as needed.
